### 30 Free Machine Learning Lectures from Bloomberg

The 30 lectures in the course are embedded below, but may also be viewed in this [YouTube playlist](#). The course includes a complete set of homework assignments, each containing a theoretical element and implementation challenge with support code in Python, which is rapidly becoming the prevailing programming language for data science and machine learning in both academia and industry. This course also serves as a foundation on which more specialized courses and further independent study can build.
